The present invention describes a computer readable medium which has the nucleotide sequences SEQ ID NO:1 to 391 (AAV52134 to AAV52524) are recorded on it, or a representative fragment or a sequence at least 95% identical to SEQ ID NO:1 to 391 (AAV52134 to AAV52524) are genomic fragments from SEQ ID NO:1 to 391 (AAV52134 to AAV52524) are genomic fragments from isolated nucleic acid molecule encoding a homologue of any of the fragments of the S.pneumoniae. The present invention also describes an isolated nucleic acid molecule encoding a homologue of any of the fragments of the S.pneumoniae genome (SEQ ID NO:1 to 391) where the rucleic acid molecule sproduced by a process comprising: (a) screening a genomic DNA library using as a probe a target sequence defined by any of the sequences in SEQ ID NO:1 to 391, identifying members of the Indiany which contain sequences that hybridise to the target sequence and isolating the nucleic acid molecules from the members; or (b) isolating molecules whose nucleic degenere is homologues to amplification primer derived from the fragment of the S. pneumoniae genome to prime the mamplification and isolating the amplified sequences. The computer

Products from the present invention can be used in diagnosis kits and assays, pharmaceutical compositions and vaccines for S. pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        and

The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes them is use in the discovery of novel antiblocits, the essential genes themselves and the discovery of novel antiblocits, the essential genes themselves and the discovery of novel antiblocits, the essential genes themselves and the discovery of novel and proteins. The proteins and the encoded proteins. The protein also useful for the identification of potential new targets for antiblotic development. The antisense nucleic acids can also be used to antiblocic development. The antisense nucleic acids can also be used to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen compounds to the expressed proteins. The proteins mucleic acid swhich are required for cell proliferation in a wide vartery of organisms. The present sequence encodes an essential processing cellular proliferation protein.

Oute: The sequence data for this patent did not form part to the printed specification, but was obtained in electronic form that directly from WIPO at the printed specification, but was obtained in electronic form the for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        121 GGTTATGATTTGCGTTATCTCATCGATACGGAAGAGACAAAACTCAATCAGACCCGCTAT 180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1137
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1197
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1257
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1317
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1377
                                                                                                                                                                               This sequence is a gene fragment from the Streptococcus pneumoniae genome. The invention provides DNA sequences (AAV65201 to AAV65304) from the Streptococcus pneumoniae genome and corresponding protein sequences (AAW80605 to AAW80728). A recombinant host containing a vector comprising any of the above nucleic acids can be used for the recombinant expression of the protein sequences. The invention also provides a DNA chip having arrayed on it at least 15 base pair fragment of any one or more of these DNA sequences. The DNA chip can be used methods for evaluating gene expression in S. pneumoniae and for identifying virulence genes in S. pneumoniae. Antibodies that selectively bind to the above proteins or apptide fragments can be used to treat S. pneumoniae infection. The antibodies can also be used to detect S. pneumoniae cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              540

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to nucleic acids (AAH90701-AAH99918)
encoding polypeptides (AAM01002-AAM01114), which are essential for the
viability of a bacterial cell wall. The acronym CPE stands for "EGF For
Expression", where CPG stands for "Conserved Essential Gene". The mucleic
acids are useful for detecting the presence of proteins essential for the
viability of a bacterial cell wall in samples such as cells, tissues,
biological fluids, blood, serum, nose, ear or throat swabs with higands,
and for detecting corresponding target nucleic acid molecules with
complementary sequences. The nucleic acids sera also useful for
complementary sequences. The nucleic acids sequence of interest is
essential for viability of a bacterial cell or whether it resides within
an operon, by integrating an exogeneous nucleotide sequence comprising a
portion of an open reading frame of the genomic sequence of interest
(comprising 200-500 base pairs) into the genomic sequence of interest
which confers a selectable phenotype to the cell, and determining cell
                                                                                                                                      1497
                                                                                                                                                                                                                             1557
                                                                                                                                                                                                                                                                                                                        1617

viability with a selection agent such as chloramphenicol. The nucleic acids and proteins are also useful as vaccines and for treating bacterial infections with gene therapy and antisense therapy. The nucleic acids also enable identification of targets suitable for the treatment of antibiotic resistant bacterial infections.
                                                                                                                                                                                                    o,

       This sequence encodes a Streptococcus pneumoniae protein that (based homology with a Cupiea lancedlata protein) is a 3-oxoacyl reductase precursor protein, and represents a DNA sequence of the invention. The DNA sequences were isolated from Streptococcus pneumoniae strain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Streptococcus pneumoniae protein; genetic immunisation; antagonist; immuniological response; incollation; antibody production; inhibitor; T cell immune response; antimicrobial compound; bacterial adhesion; extracellular matrix protein; protein-mediated cell invasion; wound;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          611
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence represents the C-terminal coding region of Fabb embodiment (coding begins at nucloctide 2) of Streptococcus pneumoniae 0100993 (NCIMB 40800). The novel Fabb polypeptides are related to other proteins of the malonyl-CoB.ACP family. The products can be used for the diagnosis of Streptococcus pneumoniae infections. Vectors containing the Fabb DNA sequence can be administered directly to a mammal to produce the Fabb peptide to provoke an antibody/T-cell response in compounds which modulate its activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CTGTCAAAAAGCTTCTGAACTTGGAGTGGTTACTCCAGCCAACTATAACACACCTGCACA 491

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             790
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        420
          invention can be used to identify compounds which interact with and inhibit or activate the activity of the proteins. Antagonists can be used to treat diseases caused by S. pneumoniae proteins, through genetic immunisation. They can also be used to induce an immunological response in a mammal by incoulation with the S. pneumoniae proteins or delivery of the encoding mucleic acids in a vector adequate to produce antibody and/or T cell immune responses to protect the animal from disease. The proteins can also be used to identify antimicrobial compounds which are capable of inhibiting their bioactivity. In particular the proteins of the invention can be used to prevent adhesion of bacteria to mammalian extracellular matrix proteins on in-dwelling devices or in wounds, to block protein—mediated mammalian cell invasion, and to block the normal progression of pathogenesis in infections initiated other than by the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       849
AAX30724 to AAX30946 represent genomic DNA sequences isolated from Streptococcus pneumoniae strain 0100993. These genomic DNA sequences encode the novel proteins given in AAY11114 to AAY1137. The proteins, isolated from Streptococcus pneumoniae, can be used in vaccines against streptococcal infections and in assays for identifying compounds that inhibit or activate the activity of the proteins. The antagonists can be used to treat an individual having need to inhibit a bacterial protein. Vectors expressing the proteins can be used to induce a protective immune response in mammals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            recreaactrescaagarestascastrercaaraceccastascascaretreaasasc

S. pneumoniae. Its encoded protein, or agonists of it,
c may be useful as an antibacterial for treatment or
prevention of infection, specifically caused by S. pneumoniae
(particularly meningitis) but possibly also Helicobacter
C pylori (ulcers and gastric cancer). It may be of particular
use before insertion of an in-dwelling device or any other
invasive procedure. The protein, or nucleic acid encoding
c it, can also be used in vaccines to induce a callular
and/or humoral immune response, or to screen for other
antibacterials. The DNA may also contain flanking sequences
that are potential sources of control elements for bacterial
gene expression. Detecting a sequence encoding the protein
can be used diagnostically, e.g. to detect a mutation for
serotyping or classifying infectious agents.

These genomic DNA sequences encode the novel proteins given in AAY11114 to AAY11367. The proteins, isolated from Streptococcus pneumoniae, can be used in vaccines against streptococcal infections and in assays for identifying compounds that

                                                                                                                 ઠે
                                                                                                                                                                                                                                                                                                                                     The interior relates to a protein (ABE/29413-ABF10803) from group A streptococcus (GRE (Greptococcus agalactice) or group A streptococcus (GRE).

(Streptococcus pyogenes), comprising one of 5483 sequences (S1), given in the specification. The proteins have antibocterial and antibiflammatory activity. (I), nucleic acids encoding (I), ABN60044-ABN71526 and antibocises that bind (I) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by CS Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes.

Nucleic acids encoding (I) are used to detect Streptococcus in a biological sample. (I) is used to detect Streptococcus in a biological sample. (I) is used to determine whether a compound binds to (I). A composition comprising (I) or a nucleic acid encoding (I), may be used to treated may be meningitis. Nucleic acid encoding (I) may be used to recombinantly produce (I) and may be cheed in gene therapy. Antibodies to (I) are used for affinity chromatography, immunoassays, and distinguishing/identifying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            480
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      486

The present invention is related to a Lactococcus lactis nucleotide sequence (ABA90521) and related proteins (ABB53300-ABB5521). The nucleic acid sequence; is useful in the detection and/or amplification of nucleic acid sequence, particularly to identify Lactococcus lactis or related species. The proteins of the invention are useful for the biosynthesis or biodegradation of a composition of interest. The invention helps research in lactic bacteria, particularly useful in the production of yogurt and cheese. Date this patent is based on equivalent patent WO200177334 (published 18-07-2001) which is available in electronic format directly from WIPO at ftp.wipo.int/pub/published_pot_sequences.
                                                                                                                                                                                                                                                                                                                                                     782872 ATGACTAAAACAGCATTTTTATTCTCAGGTCAAAGGGGCACAAAAGCTTGGAATGGCACGT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      783352 TATAACACGCCCGCACAAATTGTTATTGGTGGAAGGTGAAGTTGAGGGGGGTTGATTATGCTGTT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a protein (ABP25413-ABP30895) from group B streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GBS (Streptococcus pyogenes), comprising one of 5483 sequences (31), given in the specification. The proteins have antibacterial and antiinflammatory activity. (I), nucleic acids encoding (I), ABN66044-ABN71526 and antibodies that bind (I) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. Nucleic acids encoding (I) are used to detect Streptococcus in a bill of the sample. (I) is used to detecrmine whether a compound binds to (I). A composition comprising (I) or a nucleic acid encoding (I) may be used to an average of the disease caused by Streptococcus that is prevented or treated may be meningitis. Mucleic used in gene therapy. Antibodies to recombinantly produce (I) and may be used in gene therapy. Antibodies to (I) are used for affinity chromatography, immunoassays, and distinguishing/identifying

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a protein (ABP25413-ABP30895) from group B streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GBS (Streptococcus pyogenes), comprising one of 5481 sequences (S1, given in the specification. The proteins have antibacterial and antiinflammatory activity. (I), nucleic acids encoding (I), ABN66044-ABN71526 and antibodies that bind (I) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. Nucleic acids encoding (I) are used to detect Streptococcus in a biological sample. (I) is used to detect Streptococcus in a composition comprising (I) or a nucleic acid encoding (I), may be used to a nucleic acid encoding (I) may be used to recombinantly produce (I) and may be used in gene therapy. Antibodies to (I) are used for affinity chrontography, immunoassays, and distinguishing/identifying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           330947 Ardaaraaagrurcarrircrarrirgcregreaagrecreaaagruagaarageraga 331006

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 1,

Sequence 1987, Application US/09134001C

Patent No. 6380370

GENERAL INFORMATION:
GENERAL INFORMATION:
GENERAL INFORMATION:
TITLE OF INVENTION: WUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO STAPHYLOCOCCUS
TITLE OF INVENTION: EPIDERMIDIS FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: GTC-07

CURRENT APPLICATION NUMBER: US/09/134,001C

CURRENT APPLICATION NUMBER: US 60/064,964

PRIOR FILING DATE: 1997-11-08

PRIOR FILING DATE: 1997-11-08

PRIOR APPLICATION NUMBER: US 60/055,779
                                                                                                                                                                         4358
